

**PRECISION
FLUID POWER**
HYDRAULIC SALES & REPAIR

Send Hydraulic unit for possible repair as a spare:

Precision Fluid Power provides sales & service for virtually any hydraulic components, including pumps, motors, valves, and cylinders. We serve all industries, large or small. Regardless of what equipment you operate – industrial, mobile, agricultural, or construction – the Precision Fluid Power team can provide solutions to handle all your hydraulic needs.

All hydraulic units received by our facilities for repair are completely disassembled and cleaned for a thorough inspection. Next the precision fits are checked for tolerances. Worn, broken or missing parts are listed for replacement. After which a complete evaluation will be provided to you by our hydraulic specialists, along with a competitive quote for price and lead time of your repair.

After your approval for us to proceed, the unit is cleaned again, tolerances are reverified and the unit is prepared for the rebuild process. All contact surfaces are reconditioned or replaced, and new seals, bearings and replacement parts are installed by our fully trained technicians. Where a part proves to be obsolete or is beyond repair or reconditioning, our in-house machine shop can reduce cost and downtime by manufacturing replacements the meet OEM specifications. After reassembly, the unit is ready for testing.
